

What's My Rock?

- 1** Write or draw a description of what your rock looks like.
Is it spotted or striped?
Is it jagged or smooth?
What color and shape is your rock?

- 2** Does a magnet stick to your rock?
If it does, your rock is magnetic and contains Iron.

- 3** Put your rock in Vinegar. Some rocks contain particles, like calcium carbonate, that dissolve in vinegar. Does your rock fizz & bubble or sink to the bottom?

- 4** Scratch your rock with a penny.
Does the penny leave a scratch mark on your rock? If it does, your rock is softer than a penny.
